                                                                                                                                                                                                                                                                           NOTE2. If State is terminal h should return its true value
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         returns winning player if State is a terminal position and plyr has a higher score than the other player
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             changes State by playing Move.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (NewState) and next player to move (NextPlayer). That is, it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (for the initial game state you can use initBoard(B))
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  given that Plyr makes Move in State, it determines next state
                                                                                                                                                 returns a value B less than the actual utility or heuristic value
                                                                                                                                                                                                                                                                                                                                                                                                                     larger values are good for Max, smaller values are good for Min
                                                                                                                                                                                                                                                                                                                                                                                                                                                           given State, returns heuristic Val of that state
                                                                                                           of any node (i.e., less than Min's best possible value)
returns a value B greater than the actual utility or heuristic value
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          so that the human player can understand where they are in the \ensuremath{\mathsf{game}} .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (You can simply use printGrid(B) here)
